ENTERPRISE BUSINESS INTELLIGENCE

GAIN GREATER INSIGHT AND UNDERSTAND YOUR BUSINESS BETTER.

WITHOUT ENTERPRISE BUSINESS INTELLIGENCE

Poor Decision Making

While gathering and storing project and service data is easily done by most construction businesses, the ability to analyze and make informed decisions leveraging this data is often lacking. With data locked in spreadsheets and filing cabinets, accessing the right information your business needs to take actionable decisions can prove difficult.

Limited Visibility

With information spread out across numerous spreadsheets and software, consolidating this information to provide meaningful insights into how your business is performing can be challenging. The inability to fully understand the performance of your construction business can be quite costly and reduce overall effectiveness.

No Integration

Without a fully integrated construction software solution, not only is your information at risk of being erroneous, but may also be inaccurate as well. This is particularly troublesome when creating reports in real-time, as the information is likely to be outdated, thus resulting in an incorrect view of your business.

Lack of Business Understanding

While reports are typically a starting point for business analysis, gaining a deeper understanding of how the business is actually performing can be problematic. Simple reporting tools may provide a general idea of how certain business areas are performing, but without solid business intelligence guiding decision-making, truly understanding and effectively operating your business will be tough to say the least.

Jonas **ENTERPRISE**
SERVICE & CONSTRUCTION SOFTWARE

WITH ENTERPRISE BUSINESS INTELLIGENCE

Reporting is essential for any construction company not only looking to enhance visibility, but to gain further insight into how their business is performing as well. With the Enterprise Business Intelligence solution from Jonas, easily create real-time reports while on the go, directly from your mobile device. To view documents and information in greater detail, drill-down capabilities are available allowing your business to track each specific job aspect down to the initial invoice or work order. Export any report to Excel or PDF format and effortlessly share information, enhancing collaboration in the process. Leverage our DataMart SQL database to create both standard and matrix reports on a mobile device. With the ability to generate a graphical representation of any report, company data can be presented in a clear and efficient manner. Our solution is fully protected and secure, with access to reports only given to those authorized.

Increased Accessibility

With the ability to access information and generate reports directly from your mobile device or laptop, information is always at your fingertips. Fully integrated with the Jonas system, information is available in real-time, providing your business with the data required to make more informed decisions.

Greater Insights

Jonas Enterprise Business Intelligence provides access to information on demand, which means that your business can turn real-time data into meaningful reports. This allows your business to gain greater insight into performance and uncover specific areas that may require more attention.

Detailed Intelligence

View graphical representations of data in an easy-to-read format and gain a detailed view of how your business is performing. Utilizing our DataMart SQL database, both standard and matrix reports can be created and easily displayed. To view information in greater detail, drill-down capabilities exist to view related invoices and work orders, creating a more complete picture.

Fully Secure Solution

Jonas Enterprise Business Intelligence is completely secure, with authorization designated by the original report creator. To avoid unauthorized access, reports can be shared only with users who are logged into Jonas. If you need to send a report to a client or external contact, easily export the information to an Excel spreadsheet or Adobe PDF document.
